Pre-enrollment Page

DRAFT OUTLINE OF TOPICS

General comments
WK comments from March 31 enrollment meeting:
We're taking you to a process – it's more involved than you are used to experiencing online.
It's not quick & simple, and the reason why is we're creating these two mathematically related numbers and it's not a simple process …
Very important to set expectations.
You'll be through it in 5 mins, it's really not that complicated

Brief explanation of the two Osmio ID Pairs you will get

Note about IDQA
(Same as PLEASE NOTE on last page)

If you have more than one email
Which one should I use for verification?

What happens at the end of enrollment.
You'll be returned to the Authenticity Enterprise you came from.

Explain the P12 file
Move the stuff to here from where it is on the process pages.
Or better ... create a page with all the P12 stuff. Have a link both here, and on the process page(s) where you encounter the P12 file.

Which OS and browsers this works for
This enrollment is for one particular OS/browser combination.
You can later import P12 file(s) to other OS/browser combinations.

Animated summary of the process
(I already have this – review & update as needed)

You will need
Pencil and paper
Working webcam
Current driver's license or passport

User actions to take before starting enrollment:

TO-DO: Download the Import Wizard

Remember where you saved it.
Later, on the process page where you need it, there will be a link:
Didn't download it? Forgot where you put it? Download it again here.

TO-DO: Create a folder where you will save the two P12 files

(We should recommend a name for this folder.)
Write it down – you will need it later in the enrollment process.

TO-DO: Think up two passwords for the two P12 files (okay to have them the same)
Write them down – you will need them later in the process.

TO-DO (after enrollment):
WRITE DOWN the P12 FOLDER and PWs AND STORE OFFLINE WITH OTHER IMPORTANT PAPERS.
(I previously created a form you can print and fill in folders and PWs for these and other P12s you create as you build your certificate stack.)
